

EASYSYSTEM

Easysystem is a patented and electrified power track for the distribution of energy through multimedia power adaptors. With this new innovative system we will no longer have the power adaptors at fixed points, as they can be added and removed anywhere on the power track with a simple push and turn and above all with a high level of safety.

This system finds its ideal use in TV studios, theaters, discos, concert halls, trusses for stages, as it eliminates the

extension cables, having in a single point both the switch and the socket. The power track is available in various lengths, ranging from 1 to 2.5 m, and with a capacity of 7 Kw 32A 250 Volts, apart from its length.

Many kinds of power adaptors are available to cover any international demand, such as: Euro2, Australia, China, India, USA, Japan, Great Britain, France.
