

ISOLIGHT PANEL

Isolight Panel is a lightweight sandwich panel made of Okoumè multilayer faces and high density gummed cork, and core of closed cell foam that ensures a high heat and acoustic insulation, but with low specific weight.

Due to its high physical/mechanical performances and low weight, this panel finds its ideal use in the production of open spaces, nautical-bearing bulkheads, engine bulkheads, partitions and furniture in general. The glue used in

the assembly process of the materials is of our own invention, certified, solvent-free, with no VOC emissions and with technology that follows the nautical regulations.

Depending on the thickness required by the designer it is also possible to equip the panel with approved raceways for the passage of cables and/or pipes.
