TETTO VENTILATO STANDARD "RA"

It is a patented air-heating sandwich panel for the insulation of roofs, composed of:

- 1) Stratified wood panel, plastered on upper side with special, natural and patented cement
- 2) Closed-cell foam panel, that is grooved to facilitate the forced ventilation
- 3) Slab of fibreglass
- 4) Stratified wood panel.

This patented system allows to reduce from 80% to 90% the heat transmittance by radiation, thus helping so to keep the rooms beneath cool in summertime and consequently it becomes ideal in winter thanks to its high insulation power.

The standard dimensions of the panel are 240x120 cm with a rabbet on the four L sides and it has a total thickness of 24 cm.
