

# ULTRALIGHT PANEL

Ultralight panel is a lightweight sandwich panel composed of Okoumé multilayer or birch or marine Mdf wood faces and closed-cell foam core.

These components make this panel the ideal solution for all those situations where higher is the request for dampness resistance, dimensional stability and a good heat insulation. All qualities that are indispensable for the realizing of nautical bulkheads and furniture or divisional

walls. Depending on the thickness required by the designer it is also possible to equip the panel with approved raceways for the passage of cables and/or pipes. The glue used in the assembly process of the materials is of our own invention, certified, solvent-free, with no VOC emissions and with technology that follows the nautical regulations.
