

WOODSTONE

Woodstone is a patented coupling system between high-quality materials such as granite, marble, onyx, quartz or any other natural stone, 6 mm thick, and a multilayer Okoumè panel. It allows to simultaneously enjoy the beauty of two different components, stone and wood, but maintaining a high physical and mechanical performance in a single product.

The study and development of this product was then concentrated in finding an unique solution, that would allow to acoustically and thermally insulate also two dif-

ferent rooms through the use of one and only panel but always with high-quality finishes. It has therefore been enriched by a central core composed of special closed cell, cross-linked, Freon-free, no-hygroscopic and fire retardant foam. This product is, therefore, suitable to create walls, partitions or other like that.

The glue used in the assembly process of the materials is of our own invention, certified, solvents-free, with no-VOC emissions and with technology that follows the nautical regulations.
