

THERMAL TILES

The combination of stone with natural insulators of various kinds gave rise to the new insulated thermal tiles for floors of the line **THERMIKSTONE®** whose use, both internal and external, is ideal for new buildings or under renovation. Inside they allow, in a single solution, to insulate both thermally and acoustically any type of floor, and are particularly suitable for underfloor heating. Outside, for renovations of terraces, no demolition work will be necessary: after the simple laying on the old floor with adhesive AK2 MD R.A.M.E.C. sufficient to exert a slight pressure and the laying will be completed.

Prodotto Brevettato - Diritti riservati - Vietata qualsiasi riproduzione

To ensure greater physical/mechanical performance, the finished product will have a maximum total thickness of 20 mm (marble 10 mm + natural insulation 9 mm) and a standard size of 610x305 or 305x305 mm.

On request it is possible to create floors of various shapes and sizes suitable to form any figure, both modern and classic, called **OP ART**.
